

Petalon Landscape Management, Inc. is a recognized leader in the landscape industry for our strict adherence to green policies and environmental ethics. This conservation consciousness is prevalent throughout our company from the boardroom to the field. To accommodate clients who share these same values on the environment we have introduced our “Green Contract”. This contract offers our green initiatives, and comes with Petalon’s commitment to practice only environmentally responsible services when caring for your property’s landscape.

Water Conservation

Petalon recognizes that there is no more important and precious natural resource than water. Through the utilization of the latest technology in software (SMART controllers) and hardware (Matched Precipitation Rotators), and employing certified/well trained technicians to spearhead our Water Management practices, Petalon will save you not only water, but money as well.

Our best practices reduce run-off, overspray and costly environmental and property damage while providing an optimum moisture level for plant health and performance.

We work closely with our Local Water Districts and their innovative Irrigation Technical Assistance Program (ITAP) and Irrigation System Hardware Rebate Program (ISHRP) to help save you money while protecting our region’s scarce water resources.

Green Waste Recycling

Petalon outsources the processing of all landscape maintenance debris accumulated during routine service to recycling companies to be further processed, compacted and/or composted. This significantly reduces land fill volume and saves in debris disposal fees. Petalon also has the means to process or chip debris on site to be utilized as mulching material.

Grass Recycling

Petalon operates a fleet of mulching mowers which provide many benefits. They enable us to eliminate debris hauling & disposal costs, they help replenish the topsoil, and they provide a weekly dose of nutrients essential to healthy turf. The practice of mulching promotes turf growth with deeper, stronger roots that uses less fertilizer, and more importantly, less water.

Reduced Pesticide, Herbicide & Fertilizer Use

Our policies regarding the type and composition of pesticides, herbicides and fertilizers are being constantly revised to reflect a more environmentally friendly approach to your landscape, lessen watershed impact, and improve safety of clients and workers. We steadfastly monitor legislation governing the use of these product for environmental or health concerns. We are dedicated to using only products that provide specific, tangible results with minimal impact to the environment.

Conscious Landscape Asset Procurement & Selection

Petalon’s expert horticulturists select only plants that perform flawlessly in our USDA Hardiness zone. We make our selections with an emphasis on environmental consciousness without sacrificing aesthetics. We strive to choose plants with low maintenance costs (fertilization, pest control & care) and low environmental impact (water consumption & drought tolerance).

Emissions Reduction & Equipment Management

We mandate strict compliance with local, state & federal standards for emissions control. These stringent standards govern our equipment purchasing and maintenance. We of course, recycle all of our petroleum based waste products and have expert mechanics that ensure that all of our equipment receives regular maintenance increasing fuel efficiency and reducing carbon emissions.
